

Threat responses - activity 2 answer		
	Impact	Probability
Avoid	<input type="checkbox"/>	<input checked="" type="checkbox"/>
If we try to avoid a threat this will change the probability of it occurring but will not affect its impact should it still occur.		
Transfer	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Transferring the threat has no effect on the probability of it occurring but protects us from the impact to some degree.		
Reduce	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Our reduction response could be aimed at reducing the impact, the probability or both.		
Accept	<input type="checkbox"/>	<input type="checkbox"/>
Clearly, acceptance has no effect on either of the components of a threat. We are simply choosing to ignore it.
